

DAY-7

Date: 17-6-2020

Topic : File Handling in C

Lab Assignment

Write a C program to:

- Create a file names "test.txt" and add some text into it. Read the content of the file character by character and display it on the screen.
- Count the no. of Upper case, lower case, vowels, white spaces, characters from a text file.
- Encode a text file ("Source.txt") by adding 35 to each character and write into another file ("Target.txt"). Decode the Target.txt file to display its content on the screen.
- Enter the details of an Employee (Eno, Ename, Sal) to a file as formatted input and read them back to display it on screen.
- Create a structure Stud and take some members such as Roll, Name, Mark1, Mark2, Mark3, Total, Grade. Input the details of 5 students and computed the Total and Grade. Grade computation can be done using any of the conventional method.
Input a Roll and change its details.
